Why Scienaptic ?

EASY TO DEPLOY AND USE

- Multi-bureau connector in-built into BRE (no need for integration with separate multi-bureau module)
- Multi-bureau data mapped to normalised database with prebuilt 150+ rolled-up attributes
- Ready with connect to third-party APIs like KYC Verification, Account Aggregator, Anti-Fraud Solution and SMS
- Can be used across the credit life cycle management Origination, Customer Management (up sell and cross sell) and EWS/Collections without buying a separate license
- No-code, Interactive UI based platform to create/modify/deploy the policies

ANALYTICS-FRIENDLY TO DRIVE BUSINESS IMPACT

- Scorecards and AI/ML models deployed in under 60 minutes
- Excel-based UI to upload/download files manually in batch
- Complex calculations can be done in Excel-like interface, with option for Python module integration
- In-built portfolio analytics like Champion challenger, Back-testing, What-if simulations
- Built-in customizable dashboard suite for real-time strategy and segment performance and instant management reporting

WORLD-CLASS ENGINEERING & SUPPORT

- SOC-2 Level-2 certified. Regular VA/PT certifications done after every major release
- Hassle-free migration from on-prem to cloud with minimal effort
- Deployment time under 90 days for a faster go to market & quicker ROI realization
- Deployment of new strategies/policies done instantly without any downtime
- No use of any third-party workflow engine which ensures faster processing
- Product upgrades are quarterly and are free

Integrated solution to generate highly accurate Risk-signals across Customer life-cycle

Data APIs

Data ingestion & enrichment (AA, GST, Multi-bureau...)

Key Ratios

Databank of 1000+ highly risk predictive ratios

Scorecards

Market-tested scorecards & Approval strategies

Decisioning Engine

Real-time decisioning engine & Early-warning platform

AI/ML

Easy transition to Self-learning AI/ML models

Lender Recommendation for App-based Fintech lender

Business problem

Client is a large Mobile/Web App-based lending fintech, offering credit lines in partnership with 10+ lenders. They needed a solution to instantly recommend which lender to send a loan application for highest chances of approval. The solution should also support simulations and non-IT people should be able to manage it.

Our solution

Scienaptic automated underwriting platform delivered the following:

- No-code, drag-drop UI interface for credit team to configure rules of all lenders. Complete control with credit team without dependence on Scienaptic/internal IT
- Real-time dashboard to see performance by customer segment & by lender
- Easy back-test and A/B test module to run multiple analytical experiments
- Scalable technology to perform instant lender-recommendations on 1Mn+ applications per month; and automatic large batch simulations

Business impact

2-second cycle time for lender recommendation with credit limit with complex rules and multiple ML models

Add new lenders and modify policies & deploy quickly - GTM improved by **80%**

Reduced deviation cases from **60%** to **25%**

How Scienaptic platform helps Fintechs monetize their user base through lending

Build digital underwriting journey

Underwriting journey configured on no-code UI

Instant lender-recommendation for every loan application

Pre-approved offers for current user-base based on transaction behaviour (if data available)

Source additional data for risk assessment

Deep understanding of data useful for risk assessment

Single API hub to connect to data sources

Existing data partnerships with pre-built connections

Improve approval rates with lenders

Real-time dashboard to view Approval rates and Drivers of rejections

Analytical engine to run rapid experiments, simulations to improve Approval rates

Increase STP through analysis and back-testing

Delivering sharper risk signals across customer life-cycle

Alternate Data Ingestion & Scoring

Data Ingestion	Data Enrichment
Multi Bureau API	Normalized fields across bureaus
Acct Aggregator / Bank parser	Standard variables in Excel, JSON
GST data API	Standard variables in Excel/JSON
MCA data fetch	Standard variables in Excel./JSON
Mobile device data	SMS extraction, parsing
Bureau scrubs	+ internal DPD performance

SCIENAPTIC IP

Databank of 1000+ strongest risk predictive variables/ratios from each data source

Variable list refreshed every 6 months based on actual loan-performance data across segments

Credit Decisioning Engine (BRE)

Industry-tested Scorecards

- Bureau Scorecard
- AA/Banking Scorecard
- GST Scorecard
- Financials scorecard
- SMS / Device Scorecard
- Early Warning Scorecard

Features

- ✓ Drag-drop UI to build underwriting flows with zero IT support
- ✓ Excel-like interface to perform computations
- ✓ One-click deployment of any scorecard/ model (incl. AI/ML)
- ✓ Back-testing / Simulation / A-B testing; Run experiments
- ✓ Real-time dashboard for performance monitoring
- ✓ AI module that detects data patterns and builds predictive models

Lifecycle Use-cases

- Real-time underwriting of new borrowers
- Early-warning signal for collections
- Cross-sell / Upsell / Line top-up recommendations
- Recommend best lending partner
- Pre-approved offers for user-base or anchor supply-chain partners

© Scienaptic Confidential & Proprietary

Unified platform to run multiple Use-cases

- Real-time underwriting of new borrowers
- Cross-sell / Upsell / Line top-up recommendations
- Early-warning signal for collections
- Pre-approved offers for existing bank customers
- Rule validations for Fintech sourcing partners
- Analytical engine to run experiments, simulations

Benefits of Scienaptic analytical solution

Wide array of models for new customer underwriting, early-warning signals, cross-sell

Comprehensive score including bureau, banking, alternate data (based on AI models, back-tested on actual performance)

Day-1 model based on Scienaptic AI/ML analysis done at multiple clients.

System has ability to pull **additional data from 3rd party sources** (e.g. Bureau, LOS/LMS, AA, SMS) and include in the models

Model learns through ML algorithms as new performance data becomes available

Model can be run **real-time for instant decisioning**

CASE STUDY

Improved Approval rate, Straight-through using Scienaptic models and Monitoring dashboard

Client

Top SME lender in India

Business problem

- Client was lending to MSMEs with small establishments
- Borrowers were largely NTC and did not have reliable financials
- Underwriting based on basic policies, with limited monitoring mechanisms

Scienaptic methodology

- Redefined Field assessment questionnaire based on proven risk-predictive variables
- Built predictive scorecard using Scienaptic experience + client knowledge
- Implemented credit decisioning policies in Scienaptic platform
- Built basic dashboards and testing/simulation exercises to track performance of vulnerable segments
- Stored decisioning information in structured manner to be used in future to migrate to AI models

Business Impact

50-point scorecard
including MSME demographic and business variables

18.3%
Portfolio growth by extending reach, while maintaining 30DPD

Significant improvement in Approval rate and portfolio Bad rate

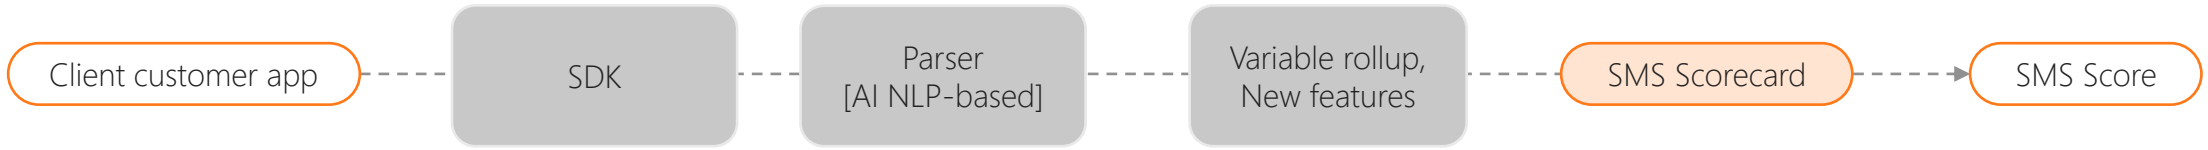
SMS solution

Features of SMS solution



Google approved

NLP-based (ML) to parse SMS and create powerful variables (300+ variables)

Risk predictive variables e.g. Salary computation, Income estimation, Income stability

Uses NER to automatically adjust to changes to bank/wallet SMS formats

85%+ parsing accuracy; 80%+ fill rate → better than competition

Pre-built SMS risk model that provides risk score based on key variables

Client gets:

(1) SMS-based risk score; (2) Key risk variables; (3) Parsed SMS output for every customer

© Scienaptic Confidential & Proprietary

SMS: Create new variables critical for risk prediction

300+ variables identified by Scienaptic based on AI models built for multiple clients

Income variables

- Total Income 1M,3M,12M, ever
- Online credit
- Times online credit
- Card credit
- Times card credit
- Auto credit
- Times auto credit

...

Spend variables

- Total spend 1M,3M,12M, ever
- Cash withdrawal
- Times cash withdrawal
- Online debit
- Card debit
- Auto debit

...

Income + Spend

- Online txn
- Card txn
- Times card txn

...

Account Aggregator solution

Scienaptic AA solution components

1 Mobile-app or Web interface for seamless user journey

2 Connectivity to AA backend to pull data in real-time

3 Pre-built analytics to deliver key variables/ratios

4 Risk score from AA data, tested on 70 lakh+ borrower data
